

Promote safety with driver monitoring and fleet-wide reporting

Driver Safety

FOR READY MIX AND BULK MATERIALS TRUCKS

PROTECT YOUR DRIVERS AND REDUCE RISK

Whether delivering bulk materials or ready mix it can be difficult to monitor and manage how safe drivers are when you can't be with them in the passenger seat for each and every journey.

Trimble Driver Safety combines in-vehicle hardware with a range of reports and dashboards about driver behavior to help managers and drivers to improve safety across the fleet.

By setting safety parameters and then scoring drivers, you can identify those drivers who could be putting themselves and other road users at risk and offer training and advice to coach them to improve.

Poor driving is also expensive driving; for those drivers over accelerating or speeding, they are wasting fuel needlessly and could be damaging the vehicle. The reports provided by Trimble Driver Safety help you see where a better driving style needs to be enforced to reduce fuel costs and minimize the impact on vehicle condition.

Benefits

- ▶ Reduces accidents and improves employee safety out on the road
- ▶ Improves public image by promoting a safe driving culture
- ▶ Increases fuel savings through improved driver behavior
- ▶ Improves productivity through better vehicle uptime
- ▶ Reduces operational costs by lowering fuel use and repair bills
- ▶ Improves driver compliance using driver-style feedback

SAFE DRIVING REDUCES FUEL USE AND COMPANY COSTS

Reducing aggressive driving (speeding, rapid acceleration and braking) can **lower your fuel use by 33%***

People who drive too fast cause, or contribute to over 665,000 or one-third of accidents every year on U.S. roads.**

PROMOTE SAFE DRIVING BEHAVIORS

Driver Safety leverages the GPS receiver in the in-vehicle hardware to collect the required data for analysis. Using Fleet Management capabilities, the extensible Driver Safety solution allows you to improve your safe-driving practices by:

- ▶ Providing detailed reports to help the drivers self-correct their driving and build a culture of safety in the fleet.
- ▶ Enabling driver-specific monitoring of speed, rapid acceleration and braking through the Driver Scorecard.
- ▶ Pinpoint vehicle location at a specific time to respond to unsafe driving complaints and traffic incident claims.

The overall driver's score is presented using scorecards, consoles and reports. By tracking driver performance, managers can follow specific behavior trends over time and identify areas where drivers require training.

The Driver Safety reports allow visibility into the driving performance of individual and team members so they can become better, safer drivers.

Features

- ▶ Dashboards provide a quick view of overall driving performance
- ▶ Driver scorecards help evaluate specific driving skills and drivers
- ▶ Map displays harsh maneuver event locations
- ▶ Exception reports capture speeding, maneuvering and idling events in real time

The Executive Console allows you to easily view and compare trends in driving performance across your business.

Selection

Features	Driver Safety
Vehicle Tracking	Yes
Vehicle Location Update Rate	60-seconds
Over The Air Programming (OTAP)	Yes
On Demand and Scheduled Reports	Yes
Organizational Hierarchy	Yes
Role-based Access Control	Yes
Map View	Yes
Posted Speed Violations	Yes
Driver Safety Scorecards and Consoles	Yes

About Trimble Construction Logistics

Ready mix, aggregates and asphalt delivery fleets of vehicles need solutions that track, schedule, route, communicate and respond in real time. Trimble offers management solutions that combine real-time GPS tracking, scheduling, dispatch, reporting and analytics to help you deliver high-quality, on-time service while reducing costs, improving performance and customer satisfaction. Over 2 million vehicles use Trimble Transportation Technology.
